Photovoltaic panel 500w parameters

GRADE A BATTERY

LiFePO₄ battery will not burn when overcharged over discharged, overcurrent or short circuit and can withstand high temperatures without decomposition.

Overview

A 500-watt solar panel has a wattage rating of 500 watts under Standard Test Conditions (STC). STC is an industry standard that involves testing panel performance in a lab under 1,000 lumens/m² of light, and at a temperature of 77°F (25°C). It indicates the power output you can expect from a solar panel under.

A lot of innovative solar technology is utilized to achieve a solar panel rating of 500 watts. Here are two technologies that are commonly used when producing these modules.

500-watt solar panels are generally made with 144 half-cut monocrystalline cells. The typical footprint of a single 500 W panel is about 27.5 square.

500-watt solar panels have their place, but it is generally not on the roof of your home. Their size and weight make them less practical to install in most.

500-watt solar panels are designed for larger solar power installations. They can be found in setups such as:

1. Utility-scale solar farms
2. Commercial jobs
3. Ground-mount systems
