Overview

How does sunygroup recycle solar panels?

SUNYGROUP's equipment recycles waste photovoltaic panels through physical means such as automatic dismantling, crushing, and sorting, so as to achieve the purpose of recycling useful components. ① The frame of the solar panel is removed by the frame removal machine.

How to remove a solar panel from a photovoltaic panel?

① The frame of the solar panel is removed by the frame removal machine. ② Remove glass on the photovoltaic panel by a glass remover machine. This is the photovoltaic panel after removing the glass: ③ The solar photovoltaic panels with the aluminium frame and glass removed enter the twin shaft shredder.

How does envie use disassembly equipment to dismantle PV panels?

“Envie will utilize our disassembly equipment to dismantle PV panels and then cooperate with Rosi, a French company that developed recycling processes allowing to separate and recover metals such as silver and high purity silicon from the PV cells,” it further explained.

What is a fully automated solar module disassembly line?

The fully automated solar module disassembly line combines a 10m x 2m x 5.5m glass separator, a 2.5m x 1.7m x 1.5m frame separator and a 17.4m x 1.9m junction box separator. It has an annual capacity of 28 MW and is said to enable complete separation of glass and aluminum as well as cell and wiring material.

What is solar PV recycling?

Solar PV recycling (photovoltaic) is an up and coming waste stream generated in both consumer and commercial fields of use. While demand may not be terribly high at the moment, there are many early-era solar power systems or

solar PV systems that will soon be reaching their end of life cycle.

What materials are used in photovoltaic panels?

Photovoltaic panels contain high components such as glass, aluminum, adhesive sealant, silicon, and silver, as well as rare metals such as steel and gallium, which have very good resource utilization value.
