## Overview

---

How much space does a photovoltaic module occupy?

Photovoltaic modules installed on a sloping roof or facade occupy an area of approximately 8 m<sup>2</sup>/kWp. Photovoltaic modules installed on the ground or on a flat surface occupy an area of approximately 20 m<sup>2</sup>/kWp, avoiding shading between the rows of modules.

How to create a 3D model for solar panels?

Placing 2D polygons together with height dimensions will result into an extruded 3D model. Experienced CAD designers or 3rd party design studios can use these generated 3D models in your project as well. Generate optimized 3D module layouts to maximize the number of solar panels in your projects.

How much space does a photovoltaic system need?

Photovoltaic modules installed on the ground or on a flat surface occupy an area of approximately 20 m<sup>2</sup>/kWp, avoiding shading between the rows of modules. The design of a photovoltaic system, from the public operator's network to the photovoltaic modules, requires careful planning and compliance with local regulations.
