

# **Photovoltaic panel export transportation process diagram**

## Overview

---

How to transport photovoltaic solar panels?

The transport of solar panels and all the components associated with this type of renewable energy can be done by road by truck or rail, by air or by container ship. What issues need to be considered when transporting photovoltaic solar panels?

Suitable packaging: The first step is to ensure proper packaging for the solar panels.

What is a solar panel production line model?

Using the Solar Panel Production Line model, we will explore the Material Handling Library and learn how to use Station element. The model shows the processes that prepare solar cells for solar panels and how the solar modules are manufactured.

How do photovoltaic panels work?

The creation of photovoltaic panels centers around turning crystalline silicon into solar cells. These cells are part of large solar projects worldwide. Learning about the solar cell manufacturing process shows how we've advanced from the first commercial solar panel to today's advanced modules. These modules power our homes and cities.

How has global solar PV manufacturing capacity changed over the last decade?

Global solar PV manufacturing capacity has increasingly moved from Europe, Japan and the United States to China over the last decade. China has invested over USD 50 billion in new PV supply capacity – ten times more than Europe – and created more than 300 000 manufacturing jobs across the solar PV value chain since 2011.

What are the components of a photovoltaic panel system?

There are two sets of elements in the photovoltaic panel system: power supply (meters, inverters, DC isolation switches) and the panel, i.e., connectors, mounting, and trackers. The importer should ensure that all these components comply with the requirements of the European Union market.

What are China's solar PV exports?

In 2021, the value of China's solar PV exports was over USD 30 billion, almost 7% of China's trade surplus over the last five years. In addition, Chinese investments in Malaysia and Viet Nam also made these countries major exporters of PV products, accounting for around 10% and 5% respectively of their trade surpluses since 2017.
