What is a PV installation agreement?

The Installation Agreement is a lump-sum agreement between the project company, as owner of the project, and the installation contractor, the contractor that will be responsible for installing the PV system, providing the balance of plant and commissioning the plant.

Do PV system commissioning standards require performance testing?

This best practice guide is PV System Commissioning or re-Commissioning Guide Supplement to characterize and maximize PV system performance. If a PV system is commissioned using industry standards, then it should produce as much energy as was expected, right?

No, PV industry commissioning standards do not call for performance testing.

Who should check the roof structure of a solar PV system?

5.9.4 The MCS Contractor shall ensure that the roof structure is checked by a suitably competent person to ensure it can withstand the loads imposed by the solar PV system. 5.9.5 For the typical roof structure types shown in Table 1, the calculation methodologies given should be used. qualified structural engineer shall be consulted.

How can we achieve low-possible costs for solar PV?

The objective is to achieve the lowest-possible costs for solar PV, not only by providing simplified processes (leading to lower transaction costs), but also by proposing new substantial approaches (for example, a split approach to the conventional engineering, procurement and construction (EPC) contract structure).

What if a MCS contractor does not design a solar PV system?

3.1.2 Where MCS contractors do not engage in the design or supply of solar PV

systems but work solely as a MCS Contractor for a client who has already commissioned a system design; then the MCS Contractor shall be competent to review and verify that the design would meet the design requirements set out in this Standard and this should be recorded.

Should PV performance and safety measurements be included in the commissioning stage?

The SunSpec Asset Lifecycle Performance Standards Committee received the message from industry professionals, investors and PV system owners that PV performance and safety measurements must be included in the commissioning stage of a project. This was confirmed in a survey performed in December, 2012 and repeated in July, 2013.
