

Overview

Where can a solar PV panel be located?

In this study, a solar PV panel could be sited almost anywhere on a rooftop, and sunlight is continuously distributed across an unshaded area. The PV panel spatial layout problem is then a continuous space location problem. Such a problem is often more challenging to formulate and solve [42,43]. A common strategy relies upon continuous space.

How to choose a suitable location for solar photovoltaic power plants?

The selection of a geographically suitable location for efficient energy production at solar photovoltaic power plants depends on many factors. To achieve a specific result, more realistic figures can be obtained using spatial and meteorological data of the studied region in geographic information systems (GIS).

What is a suitable area for solar PV installation?

Suitable areas that are contiguous are then delineated. For practical considerations, a minimum contiguous area is required for solar PV installation ; areas that fail to meet the minimum size requirement are then eliminated. The resulting areas gives the final suitable area for the optimal spatial layout design.

How to identify suitable installation sites for solar power plants?

Suitable installation sites for solar power plants are identified using an analytical hierarchy process (AHP) model based on multi-criteria decision making (MCDM) methods.

How to plan a PV installation?

Surface Area: The surface area of the site at which the PV installation is intended should be known, to have an estimation of the size and number of panels required to generate the required power output for the load. This also

helps to plan the installation of inverter, converts, and battery banks.

Why is location important for PV installation?

Location is a critical factor for PV panel installation, as different locations with varying geographical and climate/meteorological conditions may greatly affect PV panels' performance. Suitability analysis has been widely used to support the site selection of utility-scale PV installation.
