

Photovoltaic panel manual polishing method diagram

Overview

What are the different types of PV panel cleaning methods?

Several PV panel cleaning techniques are available, which can be categorized as natural, manual, automatic, and self-cleaning methods of cleaning; every method has its own merits and demerits. Figure 1 shows the classification of various PV panel cleaning methods.

How to clean PV panel surface?

In addition, very small particles cannot be removed effectively by manual cleaning process. Therefore, researchers around the globe are promoting the self-cleaning methods, viz., electrostatic method, mechanical method and coating method for PV panel surface cleaning.

How to self-clean PV panel?

Hence, researchers have provided several methods to self-clean the PV panel i.e., mechanical method, electrostatic method and coating method. With these methods, PV panel can be cleaned with low cost and low energy consumption. Different methods of PV glass cleaning are given in Fig. 2as below. How to clean photovoltaic modules?

Traditional cleaning methods, including mechanical method, manual method, and electrostatic method, can temporarily clean photovoltaic modules. However, dust still accumulates on the surface of photovoltaic modules after a period of time.

Do PV panels need to be cleaned?

Therefore, proper cleaning is very much required for better performance of PV panels. As discussed in previous sections, four different methods can be applied for self cleaning of PV panels viz. mechanical method, electrostatic method, superhydrophobic coating method and superhydrophilic coating

method.

How to clean a solar PV panel?

This natural cleaning of PV panels is not possible. In the manual cleaning technique, the PV module's front surface is cleaned manually with mops, wipers, water jetting, or detergent/water rinsing. Manual cleaning is the best-suited method for small-scale solar PV plants.
