Overview

Between 2010 and 2023, the average installed cost of photovoltaics worldwide declined steadily due to the widespread availability of materials, which reduced production expenses. In 2023, the average installed cost of solar PV systems stood at 758 U.S. dollars per kilowatt. How much does a PV power plant cost?

IEA PVPS 3 reported that the total utility-scale PV power plant market in 2017 had a size of 61.4 GWp with an average volume-weighted market price of 0.857 \$/Wp, which equals 0.759 €/Wp with the current average \$/€ exchange rate of 1.13.

How much does a photovoltaic power system cost?

Hence, the experience curve is less pronounced. The overall resulting system CAPEX for photovoltaic plants is estimated to range between around 250 and 430 € 2020 /kW el in 2030 and respectively between 170 and 330 € 2020 /kW el in 2050. The CAPEX development of photovoltaic power systems calculated above is shown in Fig. 4.

How much does a European solar PV plant cost?

Total costs for a European solar PV plant average around US \$1.7 million per MW. However, European costs are only a partial proxy for costs in other markets, and project costs must be adjusted for local duties and taxes and logistics/ transport costs.⁷⁶

How much does a solar PV system cost?

It is assumed that 2 acres/MWp is required. This estimate will vary according

to the technology chosen and land costs. Crystalline-based solar PV modules have an average global factory gate price of \$550-930k/MW_a and this can vary depending upon the perceived quality of the supplier.

Do solar PV plant owners get paid?

It is common for PPAs to allow up to a certain level of curtailment for which the solar PV plant owner is not compensated; however, the PPA states the terms of payment above this level. In some cases, the solar PV plant owner is getting paid for all the curtailed generation.
