

Photovoltaic roof support location

Overview

For homes in the UK, the optimal roof location for solar panels is south-facing. A south-facing roof receives maximum sunlight over the course of a day, especially in the northern parts of the UK. With a south-facing roof, your solar panels will produce the greatest amount of energy overall, but east or west-facing roofs.

There is virtually no debate regarding the most effective direction of solar panels. However, opinions vary when it comes to the best angle to optimise.

The angle of your solar panels is certainly important, but the most critical factor in terms of maximising energy production from your solar PV system.

If you do not have adequate space for solar panels or prefer not to mount them on your roof, installing ground mounts is an excellent alternative. With ground mounts, solar panels are.

There are so many styles of property that roof designs can vary between homes and commercial premises, which in turn affects how solar panels are positioned. Many house roofs have slopes of between 30 and 40 degrees, so the.
