

# Photovoltaic sheet pile foundation pull-out test

## Overview

---

Stress tensile tests (pull-out tests) verify the stability and load-bearing capacity of the solar panel roots, which is crucial for wind and weather resistance. How a load is applied to a pile?

The application of the load to the pile can be carried out either through the construction of a loading frame, or by employing heavy machinery as a reaction, applying the load with a pulley system or hoist in the case of axial tensile load tests and lateral load tests, or with a hydraulic jack in the case of compression tests.

How high should a pile be for a photovoltaic plant?

In any case, for the types of piles that are being used in the foundations of photovoltaic plants, it is recommended that the height of load application will be in order of 1,0 m and in no case exceeding 1,5 m.

Can helical piles be used for ground-mounted solar PV systems?

For ground-mounted solar PV systems, two different pile foundation types were experimentally analysed for the pull-out test in clayey, sandy, and mixed (c -  $\phi$ ) soils. Maximum uplift load at failure of various diameter and length were compared for plain piles with helical piles.

What is a load test on a working pile?

Load tests on working piles are normally taken up to a maximum load of DVL plus 0.5 times the specified working load. This is sufficient to verify the load settlement characteristics of the piles under service conditions.

How to improve pull-out resistance of solar array foundations?

To improve pull-out resistance of solar array foundations, a comparative experimental study was done to determine the pull-out capacity of steel pile having varying diameter and length in three different soil conditions, i.e. clayey soil, sandy soil, and mixed soil.

Do CFA Piles need reinforcement?

CFA piles subject to dynamic load tests will require the main reinforcement to extend to the pile toe. The heads of piles undergoing rapid load tests will require similar pile head preparation to that necessary for static load tests.
