Overview

!Energy independence !Environmentally friendly !“Fuel” is already delivered free everywhere !Minimal maintenance !Maximum reliability.

Light knocks loose electrons from silicon atoms Freed electrons have extra energy, or “voltage” $h^+ e^-$ Internal electric field pushes electrons to front.

Thin wafers of silicon Similar to computer chips much bigger much cheaper! Silicon is abundant (sand) – Non-toxic, safe Light carries energy into cell Cells convert sunlight energy into.

Cell: The basic photovoltaic device that is the building block for PV modules. All modules contain cells. Some cells are round or square, while thin film PV modules may have long.

How do I design a solar panel wiring diagram?
