Overview

What happened to Puerto Rico's electricity grid after Hurricane Maria?

Puerto Rico's grid collapsed in 2017 after Hurricane Maria hit the island, killing at least 3,000 residents. Months afterward crews struggled to restore generating capacity and rebuild the transmission lines.

How did Hurricane Maria affect Puerto Rico?

For instance, Hurricane Maria, which hit Puerto Rico in September of 2017, had sustained winds of 155 mph that impacted electricity access for 1.5 million grid-connected customers across the island. However, it was not only the scale of the impact, but the duration of service interruption that led to the storm's historic losses.

What is solar power in Puerto Rico?

Solar power is a renewable energy source that has been booming in Puerto Rico since the hurricane. Across the island, individuals, communities, and businesses are installing solar panels and battery systems. At the Community Foundation of Puerto Rico, Javier Rivera is working on solar systems with 50 mostly rural, underserved communities.

What's going on with Puerto Rico's energy plan?

The plan is to transition away from imported fossil fuels — petroleum, natural gas and coal — to cleaner sources such as solar and wind. Another goal is to make electricity more affordable. The island's power rates are about twice as high as average rates across the U.S. The federal study is expected to be completed by the end of this year.

Can solar power be used as a shelter in Puerto Rico?

A solar power system in its entirety can serve as a shelter in Puerto Rico, according to the person in charge. With abundant sunlight available, solar power has been booming in Puerto Rico since the hurricane. Across the island,

individuals, communities, and businesses are installing solar panels and battery systems.

Does Puerto Rico have a lack of energy access?

Progression of electricity recovery across a subset of Puerto Rico's neighborhoods using NASA Black Marble high definition nighttime lights. (Top) Deficits in energy access were found between regional urban centers (e.g., Caguas and Arecibo) and adjacent rural towns (Gurabo and Utuado respectively).
