

Picture of earth s solar system

Overview

Astronomers sometimes divide the Solar System structure into separate regions. The inner Solar System includes Mercury, Venus, Earth, Mars, and the bodies in the asteroid belt. The outer Solar System includes Jupiter, Saturn, Uranus, Neptune, and the bodies in the Kuiper belt. Since the discovery of the Kuiper belt, the outermost parts of the Solar System are considered a distinct region.

Where can I find high-resolution images of the Solar System?

Explore NASA's media galleries to view and download high-resolution images of the solar system, agency missions, and more. Discover the cosmos! Each day a different image or photograph of our fascinating universe is featured, along with a brief explanation written by a professional astronomer.

What is Eyes on the Solar System?

Eyes on the Solar System: A real-time visualization of our solar system using planetary science data. The Near-Earth Object (NEO) Surveyor is an infrared space telescope being built to help advance NASA's planetary defense efforts — the first space telescope specifically designed to hunt asteroids and comets that may be potential hazards to Earth.

Which planets are in the inner and outer Solar System?

The inner Solar System includes Mercury, Venus, Earth, Mars, and the bodies in the asteroid belt. The outer Solar System includes Jupiter, Saturn, Uranus, Neptune, and the bodies in the Kuiper belt. [35].

What are some interesting facts about our Solar System?

Our solar system is in one of the Milky Way galaxy's spiral arms called the Orion Spur. 5. A Long Way Around Our solar system takes about 230 million years to orbit the galactic center. 6. Spiraling Through Space The Milky Way is a barred spiral galaxy. 7. Room to Breathe Our solar system has many worlds with many types of atmospheres. 8.

How many planets are in the Solar System?

Our solar system has one star, eight planets, five officially named dwarf planets, hundreds of moons, thousands of comets, and more than a million asteroids. Learn about the planets in our solar system. The solar system has eight planets: Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, and Neptune.

What is a simulated view of the Solar System?

This simulated view, made using NASA's Eyes on the Solar System app, approximates Voyager 1's perspective when it took its final series of images known as the "Family Portrait of the Solar System," including the "Pale Blue Dot" image. Figure 1 shows the location of each image.

Picture of earth s solar system

Solar System

Diagram of the early Solar System's protoplanetary disk, out of which Earth and other Solar System bodies formed. The Solar System formed at least 4.568 billion years ago from the gravitational collapse of a region within a large molecular cloud. [b] This initial cloud was likely several light-years across and probably birthed several stars. [14]

[The solar system--facts and information](#)

Our solar system is made up of the sun and all the amazing objects that travel around it. Learn more about the planets, asteroids. Earth's is composed mainly of nitrogen and oxygen--key for

Solar System , NASA Space Place - NASA Science for Kids

You probably know that a year is 365 days here on Earth. But did you know that on Mercury you'd have a birthday every 88 days? Gallery of NASA Solar System Images. Glorious planets and moons to view or print. explore. These spacecraft traveled to the

Solar System Portrait

This narrow-angle color image of the Earth, dubbed 'Pale Blue Dot', is a part of the first ever 'portrait' of the solar system taken by Voyager 1. The spacecraft acquired a total of 60 frames ...

Interactive - Onspace

They provide the crucial connection for commanding our spacecraft and receiving their never before seen images and scientific information on Earth, propelling our understanding of the universe, our solar system and ultimately, our place within it.

Images Voyager Took

This narrow-angle color image of the Earth, dubbed 'Pale Blue Dot', is a part of the first ever 'portrait' of the solar system taken by Voyager 1. This data visualization uses actual spacecraft trajectory data to show the family portrait image from Voyager 1's perspective in February 1990.

[Awesome Solar System 4K Wallpapers](#)

A collection of the top 54 Solar System 4K wallpapers and backgrounds available for download for free. We hope you enjoy our growing collection of HD images to use as a background or home screen for your smartphone or computer. Please contact us if you want to publish a Solar System 4K wallpaper on our site.

3D Diagram of the Solar System

As you zoom out, the solar system's outer planets - Jupiter, Saturn, Uranus and Neptune - come into view. The date slider allows you to move forwards or backwards by a few months to see the motion of the planets along their orbits. The top

Solar System Exploration

The solar system has one star, eight planets, five dwarf planets, at least 290 moons, more than 1.3 million asteroids, and about at the equator of each planet. Each planet's width is compared to Earth's equatorial diameter. There's ...

APOD Index

Editor's choices for the most educational Astronomy Pictures of the Day about Earth:
APOD: 2005 January 2 - Welcome to Planet Earth
Explanation: Earth, the third planet from a star named the Sun. The Earth is shaped like a sphere and composed mostly of rock..

Our Solar System

Our solar system is made up of a star--the Sun--eight planets, 146 moons, a bunch of comets, asteroids and space rocks, ice, and several dwarf planets, such as Pluto. The eight planets are Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, and Neptune.

Eyes

Eyes on Asteroids Track over 30,000 asteroids that are near Earth's orbit, see the next 5 closest approaches to Earth, and learn about current and historic NASA asteroid and comet missions in this real-time 3D simulation of the solar system. Try out the interactive

In Depth , Our Solar System - NASA Solar System Exploration

Introduction The planetary system we call home is located in an outer spiral arm of the Milky Way galaxy. Our solar system consists of our star, the Sun, and everything bound to it by gravity - the planets Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, and
