

Planet in east sky

Overview

How do you know if a planet is in the sky?

Look for Venus low in the west just after sunset. It's setting by the time the sky is fully dark. Saturn is visible toward the southeast as soon as it gets dark out, and sets by dawn. Mars rises around midnight all month. By dawn it has climbed quite high into the south-southeastern sky, appearing together with Jupiter.

What can you see on a night sky map?

The map includes the Moon, stars brighter than magnitude 5, the five bright planets (Mercury, Venus, Mars, Jupiter, and Saturn), and deep-sky objects that can be seen without the use of optical aid. [How Do I Use the Interactive Sky Chart to Explore the Night Sky?](#)

Learn sky chart basics in our short tutorial:.

When is Uranus visible?

Uranus is visible high in the southwestern sky preceding sunrise on October 22, 2024. It is visible to the right of Jupiter. It rises around a couple of hours after sunset. As Uranus shines at the edge of naked-eye visibility, it is hardly visible to the unaided eye unless you have clear eyesight and a very dark sky.

What is the interactive sky chart?

Powered by Heavens Above, our interactive viewer charts the night sky as seen by eye. The map includes the Moon, stars brighter than magnitude 5, the five bright planets (Mercury, Venus, Mars, Jupiter, and Saturn), and deep-sky objects that can be seen without the use of optical aid.
