

Planet research for kids

Overview

What is National Geographic Kids' Space?

Using our National Geographic Kids' Space primary resource sheet, pupils will learn fascinating facts about the solar system by taking a journey to the different planets orbiting the Sun.

What is a planet in astrology?

What is a Planet?

The planets in our solar system are shown from top to bottom: Mercury, Venus, Earth (and our moon), Mars, Jupiter, Saturn, Uranus, and Neptune.
What is a Planet?

.

What should children learn about the Sun?

Pupils should be taught to: Pupils should learn that the Sun is a star at the centre of our solar system and that it has eight planets: Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus and Neptune (Pluto was reclassified as a 'dwarf planet' in 2006).

Which planets have a surface?

In the third place are the terrestrial planets. Though they are the smallest, these planets are the only ones that have a surface. In order of size, they are Earth, Venus, Mars, and Mercury. A couple of years ago, Pluto was also considered a planet and was the ninth planet of the Solar System. However, Pluto is now considered a dwarf planet.

What is the biggest planet in the Solar System?

The gas giants are the biggest planets in the solar system. Jupiter has a mean radius of 69.911 kilometers / 43.440 miles, a diameter at the equator of

around 142.984 km / 88.846 mi, and a diameter at the poles of 133.708 km / 83.082 mi. It is the biggest planet in the Solar System. Compared to Earth, it has more than 11 times its diameter.

What are the three conditions for planethood?

They put their heads together in 2006 and came up with three conditions for planethood: A planet must orbit the sun, be large enough so that its own gravity molds it into a spherical shape, and it must have an orbit free of other small objects. Unfortunately for Pluto, our one-time “ninth planet” failed to meet the third condition.
