# **Pole type solar street light bracket**

*LiFePO<sub>4</sub> Battery, safety*

*Wide temperature: -20~55°C*

*Modular design, easy to expand*

*Wall-Mounted&Floor-Mounted*

*Intelligent BMS*

*Cycle Life: ≥ 6000*

*Warranty: 10 years*

## Overview

---

Do solar lights need brackets?

Brackets are almost always required for solar lighting installations. This is because the solar is almost always mounted to the top of the pole and the fixture needs to be mounted lower on the pole. The fixture bracket allows the fixture to mount directly to the same pole and out away from the pole at times.

What are solar street light poles?

Alongside the evolution of modern transportation, solar street light poles will also serve as a platform to integrate other modular systems, such as IoT-based intelligent traffic management, city governance, etc. Solar street light poles are generally set up and fixed on sturdy reinforced concrete foundations like most street lights.

What makes up a commercial solar street light?

The components that make up a commercial solar street light are similar to other commercial solar lights. Each light consists of a solar power array, battery backup, DC light fixture, controller, fixture bracket, and a pole.

What is a solar street light fixture?

A solar street light fixtures are a particular fixture that operates off DC power. Most manufacturers have their line of fixtures and do not work with fixtures outside their main line. This is because extensive testing has been completed, and warranties exist for all components.

What size poles do I need for a solar light system?

The poles provided for standard light applications are quite different from what is provided for a solar lighting system. Solar poles are typically very large, with a 4-6" tip and an 8-14" base, and should always be round. Square poles do not allow for mounting the solar and fixture in any direction and tie

you to four direction orientations.

Which solar street lights are the best?

When it comes to solar street lights, LED fixtures are the most popular pairing for the solar power assembly; however, other lamp options are still available. The light fixture should provide the needed light levels on the ground for easy visibility while providing the most efficient lighting possible.
