

# Potassium nitrate solar thermal energy storage

## Overview

---

Can potassium nitrate be used as thermal energy storage media?

Adding nanoparticles to potassium nitrate can increase its thermal energy storage capacity. Thus, these new  $\text{KNO}_3$ -based nanomaterials can be successfully used as thermal energy storage media in concentrated solar power systems. Agency IIE.

Can molten nitrate salt be used for solar energy storage?

High Temperature Properties of Molten Nitrate Salt for Solar Thermal Energy Storage Application. In: Wang, S., Free, M., Alam, S., Zhang, M., Taylor, P. (eds) Applications of Process Engineering Principles in Materials Processing, Energy and Environmental Technologies. The Minerals, Metals & Materials Series.

What is thermal energy storage?

Thermal energy storage (TES) is a vastly growing technique that allows for the generation of dispatchable electricity in modern concentrating solar power (CSP) plants. In solar tower systems the key to success is the use of a heat transfer fluid (HTF) and storage medium known as Solar Salt.

What is molten salt storage in concentrating solar power plants?

At the end of 2019 the worldwide power generation capacity from molten salt storage in concentrating solar power (CSP) plants was 21 GWh el. This article gives an overview of molten salt storage in CSP and new potential fields for decarbonization such as industrial processes, conventional power plants and electrical energy storage.

What is molten nitrate salt?

Sensible heat storage in molten nitrate salts is a key technology when it comes to thermal energy storage in combination with concentrating solar power (CSP) plants. Currently, a mixture of sodium and potassium nitrate

called Solar Salt is used at temperatures between 280 and 560 °C.

Is solar salt a heat storage material?

It is relevant for the field of energy storage, more precisely for sensible heat storage with nitrate salt melts as heat storage material and heat transfer fluid (HTF). The investigated material Solar Salt is a mixture of sodium nitrate ( $\text{NaNO}_3$ , 60 wt.%) and potassium nitrate ( $\text{KNO}_3$ , 40 wt.%).

## Potassium nitrate solar thermal energy storage
