

Power Storage Cabinet User Manual

Overview

How to install a power distribution cabinet?

The Power Distribution Cabinet should be placed and installed on a floor with concrete structure or made of other solid and non-combustible materials. The interior space should have good ventilation as well as temperature and humidity control, and keep away from gas and corrosive substances.

What power levels can a power distribution cabinet use?

You can flexibly choose different power levels (30kVA, 50kVA, 80kVA, 100kVA or 125kVA) according to your power demands to your system. The Power Distribution Cabinet can be used with a transformer for voltage conversion, or installed with Transient Voltage Surge Suppressors (TVSS) to protect highly sensitive equipment.

How to check the status of a power distribution cabinet?

The LCD monitor of the Power Distribution Cabinet can display the current system status and event logs, and allows you to set and view parameters. If the back light is not lit, pressing any button will activate it. On the initial status screen, you can view the system date and time as well as the switchboard circuit breaker status.

What are the safety rules of energy storage converter?

ing way
6.3 Electrical connection
6.3.1 General safety rules
Danger of electric shock!
Please make sure that the installation on cables and equipment are not charged before installation.
The capacitor inside the energy storage converter is a hazardous energy storage device, do not place flammable.

How do I set a power distribution cabinet alarm?

6.6 Alarm Function Settings
To make the Power Distribution Cabinet play its monitoring alarm role, you must set each alarm value for the system, switchboards and branches and set the alarming switches. When the system

detects abnormal conditions, it will alert the user through the buzzer, and record in the alarm log.

What should I do if my power distribution cabinet is energized?

When operating the Power Distribution Cabinet in an energized state, please use safety devices (such as insulating gloves and shoes) and operate on an insulating rubber cushion to avoid electrical shock. There should be at least one person to give assistance. In case of an accident, you should be adaptable and seek assistance.
