

# Power lighting systems

## Overview

---

What are the energy efficient installations related to lighting control system?

This section describes the energy efficient installations related to lighting control system. Digital and addressable lighting interface (DALI) is a digital communication standard that guarantees the exchangeability of dimmable electronic ballasts from different manufacturers.

Is power & lighting systems a good business?

In 2009, we were awarded a “Best of Business” award by the Small Business Commerce Association. This award honors excellence in business execution, marketing, and customer service. The 2009 Best of Business Award program consisted of 5 million nominees across all 50 states in 2500 cities. © 2020 Power & Lighting Systems, Inc. All rights reserved.

What is a DALI lighting system?

With the DALI, the lighting system in buildings can be designed to suit various dimming and functional requirements via Central Control and Monitoring Systems. Optimisation of energy consumption could also be achieved by automatic dimming and switching by local daylight or photocell and occupancy sensors.

What is energy-efficient lighting control?

Energy-efficient lighting control based on a variety of technologies have been proven to reduce lighting energy consumption in commercial and industrial buildings by up to 70%. Examples of the most common types of lighting controls include occupancy sensors, time scheduling, bi-level switching, and dimming technology.

What are the different types of lighting controls?

Examples of the most common types of lighting controls include occupancy sensors, time scheduling, bi-level switching, and dimming technology. They

can be used solely or in combination depending on the lighting requirement. Dimming technology became more popular in recent years.

How a lighting control system can reduce energy consumption?

Proper control using appropriate equipment can significantly reduce the energy consumption of lighting systems. For example, we can control the on/off or/and light level of the lamps at specific time period and different situations. This section describes the energy efficient installations related to lighting control system.
