

Powerchute only on backup power for seconds

Overview

How does the PowerChute Personal Edition work?

The PowerChute Personal Edition software works with your battery backup and Microsoft® Windows® to provide a power protection solution. It protects your files and computer system during electrical power problems. The solution does this by initially providing battery power and, during a prolonged power problem, by initiating hibernation.

How does PowerChute work during a power outage?

Use PowerChute Personal Edition software to configure the UPS settings. During a power outage, PowerChute will save any open files on your computer and shut it down. When power is restored, it will restart the computer. Note: PowerChute is only compatible with a Windows operating system.

How does PowerChute monitor a battery backup?

While the internal battery in your battery backup is supplying power, PowerChute monitors the situation with reference to the options chosen on the Runtime page under Configuration. When the set conditions are met, a warning dialog box displays. If hibernation is enabled, PowerChute displays the Hibernation Warning dialog and initiates hibernation.

How do I configure PowerChute business edition?

In the future when starting a new thread it is helpful to list the version of PowerChute being used along with the UPS model. To configure PowerChute Business Edition go to Configuration - Shutdown Settings and set At runtime limit to 30 minutes. When the UPS has less than 30 minutes of runtime remaining it will start the shutdown process.

Is the PowerChute Personal Edition resaleable?

This Publication shall not be for resale in whole or in part. The PowerChute Personal Edition software works with your battery backup and Microsoft®

Windows® to provide a power protection solution. It protects your files and computer system during electrical power problems.

How long does a PowerChute shutdown pause last?

When the PowerChute server operating system issues a shutdown command, there is a pause of 70 seconds until it executes. This is made up of shutdownDelay (10 seconds) and shutdownCommandDuration (60 seconds) in the INI file. The INI file can be edited using any text editor.
