## Overview

How do I design a photovoltaic and solar hot water system?

Provide an architectural drawing and riser diagram for the homeowner showing the planned location for future photovoltaic and solar hot water system components. Space requirements and layout for photovoltaic and solar water heating system components should be taken into account early in the design process.

How do roof mounted PV solar panels work?

Roof mounted PV Solar Panels are typically supported by racking systems which come in two basic forms. The first is a mechanically fastened system and the second, the more common of the two, is a ballast restrained system. The mechanically fastened system penetrates through the roofing membrane and can be used in pitched roofs and flat roofs.

Can solar panels be used for roofing?

The following white paper provides recommendations on the structural design of roofing systems when considering solar panels. Solar power is produced by converting sunlight into electricity. The two major methods of converting sunlight into electricity are photovoltaics (PV) and concentrated solar power (CSP).

Can solar panels be installed on a sloped roof?

As well, solar panel installations on sloped roofs can act to trap snow that otherwise may have been considered to slide off the roof structure. Finally, roofing systems installed in new buildings are typically designed to outlast or at least match the average life of the new solar PV system which is about 25 years.

Do solar panels need a roof racking system?

Designers must design roofing systems for the structural impact of existing,

new and future solar panel installations. Roof mounted PV Solar Panels are typically supported by racking systems which come in two basic forms. The first is a mechanically fastened system and the second, the more common of the two, is a ballast restrained system.

Do rooftop solar panels affect a building?

The larger the surface area required to support the PV system, the greater the potential impact on the building structure. The use of rooftop solar panels increases the superimposed dead load (SDL) of the roofing system and can have varying impact on a building depending on what material is being used for the structural system.
