

# **Salted fish photovoltaic panel bubbles**

## Overview

---

Do floating PV panels affect aquatic life?

To meet the surge in solar energy demand, deployment of PV panels on water surfaces has emerged as an attractive option. Despite the potential advantages associated with floating PV (FPV) systems, current understanding of their impact on aquatic life remains scarce.

Does Floating photovoltaic (FPV) affect the aquatic environment?

With the aggravation of global warming and the increasing demand for energy, the development of renewable energy is imminent. Floating photovoltaic (FPV) is a new form of renewable energy generation. However, the impact of FPV on the aquatic environment is still unclear.

Can Floating photovoltaic be used on fish ponds?

Mathematical modeling suggests high potential for the deployment of floating photovoltaic on fish ponds. *Science of the Total Environment* 687: 654–666. Chen, Y., J. G. Kirkerud & T. F. Bolkesjø, 2022. Balancing GHG mitigation and land-use conflicts: alternative Northern European energy system scenarios. *Applied Energy* 310: 118557.

How do Floating photovoltaic systems affect the environment?

Floating photovoltaic systems may impact their environment at different scales. Main impacts include shading and provision of additional substrate for epibiota. Interactions with mobile species are important, at least at local scales. Further work is needed to understand social impacts of large-scale FPV.

Does fish-photovoltaic integration affect aquatic environment?

The impact of FPV on aquatic environment has been assessed. The scale effect of FPV and impact of “fish-photovoltaic integration” are revealed. Spatial-temporal and object specificity of impact on aquatic environment is

reviewed. The responds of FPV to the challenges of global climate change are further discussed.

Does FPV power station affect aquatic environment?

Based on the above analysis, the construction of FPV power station has limited impact on aquatic environment, mainly reflected in the impact on DO. However, the development of “fishery and photovoltaics integration” project will lead to serious eutrophication of water bodies.
