

Selling micro photovoltaic panels

Overview

Micro-inverters and power optimisers are an upgrade on traditional PV system design, by maximising the electricity generated from each individual panel. They do this by shifting Maximum PowerPoint Tracking(MPPT) to the panel level. This is particularly beneficial on roofs with multiple orientations or shading, as the panels.

Before diving into optimisation, it's worth familiarising yourself with how a regular PV system is set up. The solar modules are connected in a string.

As the name implies, a micro-inverter is a small version of an inverter, converting DC to AC power from an individual panel. Each module in the system gets its own MPPT, meaning individual generation is maximised no matter its.

A solar panel power optimiser is like a halfway house between micro-inverters and a standard system set up. Each module has MPPT but there is still only one system inverter. An.
