

Server 41 critical microsoft- windows-kernel-power system

Overview

This event 41 indicates that an error prevented Windows from shutting down correctly or the computer shuts down unexpectedly. Most likely caused by an interruption in the power supply issues, driver issues, overheating, faulty ram modules, or a hardware problem. Try updating the graphics, chipset, sound, and network drivers. What is kernel power event ID 41?

When a Windows-based computer starts, a check is performed to determine whether the computer was shut down cleanly. If not, a Kernel Power event ID 41 message is generated. An event ID 41 is used to report that something unexpected happened that prevented Windows from shutting down correctly.

What happens if a computer restarts and generates event ID 41?

The computer restarts and generates Event ID 41, but the BugcheckCode and PowerButtonTimestamp values are zero. In such cases, something prevents Windows from generating error codes or from writing error codes to disk.

What does event ID 41 mean in Windows 10?

Check the time zone of the server. Event ID 41: This event indicates that Windows restarted without a complete shutdown. Event ID 1074: This event is logged when an application is responsible for the system shutdown or restart. It also indicates when a user restarted or shut down the system by using the Start menu or by pressing Ctrl+Alt+Del.

What causes kernel event 41?

kernel event 41 is a result of the crash, not a cause in itself. Windows is reporting it found the previous shutdown was unexpected. What are full specs of the PC?

did you actually get a bsod or did it just restart?

I don't see a memory dump attached to post?

I7 9700k EVGA 3080 Ultra FTW 32 GB Tridentz Ram EVGA 850 Gold PSU Icue 150i watercooler.

What does evtv error 41 mean?

This error could be caused if the system stopped responding, crashed, or lost power unexpectedly. The time shown in the .evtx file is adjusted to your system's time. Check the time zone of the server. Event ID 41: This event indicates that Windows restarted without a complete shutdown.
