

Silicon rectifier capacitor energy storage DC system

Overview

What is supercapacitor energy storage?

This innovative system incorporates Supercapacitor Energy Storage (SCES) at the grid-forming inverter's direct current (DC) link to generate pulsating active power essential for inertia support. Furthermore, the SSC serves the grid by providing reactive power through volt-var control.

What is sic-based power conversion?

The application of SiC-based power conversion in utilities, including the FACTS devices, power electronic interfaces for distributed energy resources, and energy storage systems, can significantly improve the efficiency and reliability of the system, and reduce the system weight and volume.

How is a DC bus connected to a supercapacitor?

The DC bus voltage is connected to the super capacitor through a phase-shifted full-bridge inverter, a high-frequency transformer isolation buck and an output-side interleaved boost rectification filter. The system controls the bidirectional flow of energy based on the DC bus voltage and the supercapacitor SOC.

What are energy storage capacitors?

Capacitors exhibit exceptional power density, a vast operational temperature range, remarkable reliability, lightweight construction, and high efficiency, making them extensively utilized in the realm of energy storage. There exist two primary categories of energy storage capacitors: dielectric capacitors and supercapacitors.

How does a supercapacitor control the bidirectional flow of energy?

The system controls the bidirectional flow of energy based on the DC bus voltage and the supercapacitor SOC. First, combine the SOC of the supercapacitor with the desired DC bus voltage as the input reference for the

outer loop voltage regulator.

What is a decentralised virtual resistor and capacitor droop control?

A decentralised virtual resistor and capacitor droop control is designed to split the power of the ESS with a diverse time scale response (i.e. BESS, FESS and SC) in the medium voltage DC (MVDC) system and prepare the ESS for the subsequent power demand by the SOC recovery control .
