## Overview

So you're thinking of installing solar panels for your home, your roof is made from suitable materials and you're ready to invest, but what angle and direction do your solar panels need to be pointed to perform at their optimum?

To generate the most electricity solar panels in the UK should ideally be mounted in a south.

We wouldn't advise on installing solar on a north facing roof - the returns in terms of energy output would be minimal making solar an unwise.

If you plan to install solar on a flat roof then be aware of potential pitfalls and extra costs, as it's likely you'll want the panels mounted on adjustable frames. This will allow you to.

Installing your solar panels using the correct orientation and angle will ensure they operate at the highest efficiency level. A poorly positioned panel.

So now you know what angle the panels should be mounted, how do you go about measuring your roof pitch?

Roof pitch is measured as a vertical.
