

Smart Microgrid Company Interview Questions

Overview

How are Microgrid developers interviewed?

In-person interviews and site visits were supplemented with a literature review, phone or email interviews, and developer data (e.g. operational or financial data). Figure 17: Map of Microgrid Developer and Site Visits in India.

Should a microgrid be integrated with a utility grid?

To do this seamlessly, the microgrid should be integrated with the utility's automation systems at the substation and distribution levels. By connecting a microgrid to the utility grid as a DER, you can help increase the role of renewables on the grid and improve grid resilience.

Do smart microgrids need intelligent demand-side management?

Intelligent demand-side management (DSM) approaches are necessary in smart microgrids due to the presence of both power generation and demand uncertainties. (Note to Practitioners-This article is motivated by the emerging need for this in smart microgrids.).

Why should you invest in a microgrid?

Enterprises are more motivated than ever to control energy costs and increase sustainability, while the utility grids they rely on grow more vulnerable due to aging infrastructure, extreme weather, and rising energy demand. A microgrid can help your organization achieve its goals and control its energy future - with or without capital investment.

How does a microgrid work?

Short Answer: Microgrids keep the power flowing to their customers by islanding or disconnecting from the central grid when it fails. The generation resources within the microgrid — perhaps solar, storage, batteries, wind, natural gas, diesel or combined heat and power — then kick in to provide power to the local customer.

What is an intelligent Microgrid controller?

An intelligent microgrid controller determines the optimal times to consume, produce, store, or sell energy based on weather, predicted utility rates, and other factors. It allows you to use your own loads without paying peak rates from the utility and the option to sell excess power when available.
