

# **Solar energy can generate electricity with motors**

## Overview

---

How does a solar motor work?

According to the model, when it's sunny, the solar array generates enough power to operate the motor, storing excess energy in the battery. When it's overcast, the motor runs off the battery. The motor's regenerative braking system charges the battery whenever the brakes are applied, turning kinetic energy into electrical energy.

Why do solar vehicles use electric motors?

Electric motors in solar vehicles are responsible for converting electrical energy stored in the batteries into mechanical power that propels the vehicle. These motors offer high torque and efficiency, providing a smooth and responsive driving experience. Some solar vehicles employ multiple motors for improved performance and control.

Can a solar powered motor be used in a car?

The system relies on AI to optimize the solar array's output and operate the motor at 88 percent efficiency; real-world DC electric motors have efficiencies of 75 to 80 percent. Such solar-powered motors could someday be used in industrial machines, household appliances, and even electric cars.

Could a solar powered electric motor be used in a home?

This model for a solar-powered electric motor could be used in an industrial setting or for household appliances, such as refrigerators and fans. Mohanty says he hopes to see such a system someday used in electric vehicles, which would eliminate the need to plug the EV into the main power grid.

How does solar power work?

It can be harnessed through solar PV systems, which directly convert sunlight into electricity, or concentrated solar power (CSP) systems, which use mirrors or lenses to focus sunlight onto a receiver for heat generation. Electric

vehicles are automobiles that run on electricity stored in batteries.

Can solar powered motors be used in industrial machines?

Such solar-powered motors could someday be used in industrial machines, household appliances, and even electric cars. Bismit Mohanty, the lead author on the study, says the focus of the model was on boosting the overall efficiency of the system, to obtain the highest output of the motor for the solar power available.
