What is a solar hot water system?

A solar hot water system is a renewable energy technology that harnesses the power of the sun to provide heat for domestic hot water purposes, much like traditional solar panels. The basic principle behind solar hot water heating is the conversion of sunlight into heat energy.

How does a solar water heating system work?

The heated water or heat-transfer fluid then runs from the collectors to your hot water cylinder. This way a solar water heating system can provide your home with free heated water. Solar thermal panels are not to be confused with solar panels, which use the energy from the sun to generate electricity.

How much hot water does a solar water heating system produce?

Generally, a solar water heating system can produce between 40-70% of the hot water needed for a family of 4 annually. In a similar way to solar panel efficiency, exactly how much hot water you will benefit from is difficult to estimate, however, as there are a number of factors to consider:.

Should you install a solar thermal system for heating hot water?

Installing a solar thermal system for heating hot water is a good move for the environment. But before you go ahead, it's essential to know all the facts so you can decide if a solar hot water system is the right choice. First, it's important to point out that there are two types of solar panel systems:.

Can solar panels heat water?

The output of solar PV panels can be diverted to heat water, but solar water heating is more efficient. This means it will take up much less roof space than PV panels would for the same energy output. Your home could even have both solar thermal and solar PV, to generate the largest amount of renewable energy from your available roof area.

Is solar water heating a good idea?

In the summer, it should provide around 90% of your hot water requirements, dropping to around 25% in the winter. Sunlight is free, so your hot water costs will be reduced. Solar water heating is a renewable heating system and can reduce your carbon dioxide emissions.
