

Solar energy storage heating system

Overview

STTs are TES systems where the source of heat is provided by the solar field, capturing the excess of energy not directly converted into power or other useful utility. Can solar panels charge storage heaters?

If you have solar panels, it's worth using the electricity your panels generate to charge up storage heaters during the day and release the heat in the evening. In fact, using solar panels to charge storage heaters is an excellent way to kick carbon and cut your running costs.

What is solar-powered residential heating?

Spanish heating specialist Elnur Gabarron has developed a new solar-powered residential heating concept based on the use of storage heaters. "Our storage heaters are specially designed to work on grid-connected PV installations, using surplus power to produce sustainable heating," a company spokesperson told pv magazine.

Can a solar heating system be used as a backup system?

The system can work as a backup solution, combined with existing conventional heating, or as a household's main heating system, with minimal use of grid electricity. Spanish heating specialist Elnur Gabarron has developed a new solar-powered residential heating concept based on the use of storage heaters.

What is thermal energy storage?

Thermal energy storage or thermal stores are vessels used to store excess heat generated from a domestic renewable heating system. A thermal store is a way of storing and managing renewable heat until it is needed. Heated water is usually stored in a large, well-insulated cylinder often called a buffer or accumulator tank.

How does a solar water heating system work?

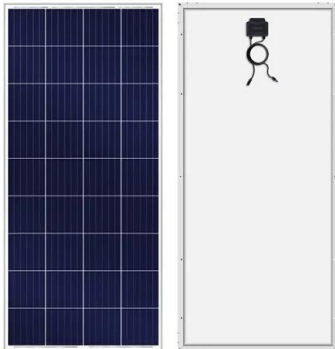

Solar water heating systems, or solar thermal systems, use free heat from the sun to warm domestic hot water. Thermal energy storage or thermal stores is a mechanism of storing excess heat generated from a domestic renewable heating system.

What is a storage heater?

Storage heaters mean you can take advantage of lower off-peak electricity rates to heat your home. They are part of an electric heating system and you'll need a time-of-use tariff (such as Economy 7 or Economy 10) to access cheaper electricity prices.
