

Solar panels have radiation

Overview

In order to understand the type of radiation solar panels emit, we need to understand how these systems work. These systems are typically broken down into three components: 1. The solar panels themselves 2. The wiring systems 3. The inverter First of all, the solar panels themselves are not likely to be an EMF radiation.

So, we're going to break this down into the two sources of radiation that a solar panel system could expose you to: 1. RF radiation from the meter 2. Dirty Electricity Now, I'm not going to go.

There are some strategies you can use protect yourself from radiation that ultimately is caused by solar panel systems. Just like before, we'll break this into two different pieces.

The bottom line is, yes, solar power systems do ultimately cause an increase an EMF radiation, however, I wouldn't say they are the biggest culprit. This is a complicated issue though, and I've had some questions about it.
