

Solar photovoltaic bracket disassembly diagram

Overview

What should I do if my PV module is broken?

Contact with module surfaces or frames may cause electric shock if the front glass is broken or the backsheet is torn. The PV module does not contain any serviceable parts. Do not attempt to repair any part of the module. Keep the junction box cover closed at all times. Do not disassemble a module or remove any module part.

How to unpack JA Solar modules?

Store pallets in a ventilated, rain-proof and dry location until the modules are ready to be unpacked. Please unpack the package of JA Solar modules according to “JA Solar Modules Unpacking Instruction”. Do not lift the modules by grasping the module’s junction box or electrical leads in any condition.

What should you not do with a PV module?

Do not drop the PV module or drop objects onto the module. Do not attempt to disassemble the modules, and do not remove any attached components from the modules. Do not scratch or otherwise harm the back sheet, the glass, or the junction box. Do not pull or twist the cables or touch them with bare hands.

Which materials should be used to install photovoltaic modules?

JA Solar recommends that when installing modules at the seaside, stainless steel or aluminum materials should be used to contact the photovoltaic modules, and the installation parts should be well protected from corrosion. The tilt angle of the modules is measured between the surface of the modules and a horizontal ground surface.

What happens if a PV module is exposed to sunlight?

PV module connectors pass direct current (DC) when exposed to sunlight or other light sources. Contact with electrically active parts of the module, such

as terminals, can result in injury or death, irrespective of whether or not the module and the other electrical equipment have been connected.

Do PV modules have a switch?

Any contact of 30V or larger DC Voltage can be fatal. In case of no connected load or external circuits, modules can still produce voltage. Please use insulation tools and wear rubber gloves when operating modules in the sunlight. The PV modules do not have a switch.
