

Solar photovoltaic panel fixing mechanism

Overview

What type of fixing system is used for solar PV panels?

The type of fixing system used will depend on whether the solar PV panels are going to be: ground mounted. Solar PV panels can be retrofitted onto an existing roof, on top of the tiles or other roofing materials, using roof anchors (also called roof-hooks or brackets), mounting rails and clamps.

How do solar PV roof fixing systems work?

Get more information about solar PV roof fixing systems at the Ecofirst website. Solar PV tracking systems move the PV panels to track the sun, and are claimed to produce up to 30 per cent more electricity than a static array. The downside is the additional cost.

What are solar photovoltaic (PV) mounting solutions?

Solar photovoltaic (PV) mounting solutions are fundamental elements of any solar energy system, offering robust and reliable platforms for the positioning and orientation of solar panels. They facilitate optimal energy generation by aligning the panels towards the sun to capture maximum sunlight.

Do you need Scaffolding for solar panels?

Unless your building is single storey, you'll need to have scaffolding put up. The fixing system used to hold solar PV panels on your roof must be strong enough to support the weight of the panels in all weather conditions, including strong wind.

What is a whole roof solar system?

Whole roof solar systems mean that your Solar PV panels become the fabric of your roof, serving two purposes, weather proofing and energy supply. The Solar PV panel frames are bespoke for the mounting system so there is a limited choice of panels with these set ups. Luckily there are still good quality panels to choose from.
