

# **Solar power generation WeChat consultation**

## Overview

---

What's going on with solar energy technology?

According to Wang Shijiang, secretary-general of the association, technological prowess has been evident in continuous breakthroughs, including the 33.9 percent conversion efficiency in crystalline silicon-perovskite tandem solar cells set by China's solar energy giant Longi Green Energy Technology Co Ltd last year, yet another world record.

What is the future of solar power generation?

With continuous breakthroughs in PV technology and more diversified export market, renewable energy generation is predicted to play a dominant role in the power generation landscape by 2030, he said. Manufacturing, installed capacity and exports of the solar sector are expected to show robust growth, he added.

How can China reduce the cost of photovoltaic power generation?

Continuously enhancing the conversion efficiency of photovoltaic cells is an effective measure to reduce the overall cost of photovoltaic power generation, he said. China added 216.88 GW of new PV capacity in 2023, up 148.12 percent from 2022, when the country added 87.41 GW of solar.

How much solar power will China have this year?

The association forecasts new PV capacity addition of 190-220 gigawatts (GW) this year, with consumption and demand for solar energy in China projected to remain high and steady in the coming years, said Wang Bohua, honorary chairman of CPIA, during a PV industry conference in Beijing on Wednesday.

## Solar power generation WeChat consultation
