Overview

Moons travel around planets. Earth has got just one moon, but there are at least 150 moons in our solar system. Jupiter and Saturn are the planets with the most - 53 confirmed moon.

Stars are enormous balls of very hot gas. Our closest star is the sun, and it's 150 million km a.

Yuri Gagarin became the first human to travel in space in 1961. Then, in 1969, astronauts Neil Armstrong and Buzz Aldrin landed on the moon as part of the Apollo 11 mission. There h.

An easy way to remember the order of the planets is to use a special sentence, such as 'My Very Educated Mother Just Served Us Noodles'. The first letter of each word is the first letter of e.

All of the planets in the solar system orbit the sun. Mercury, Venus, Earth and Mars are called 'terrestrial planets'. They are mostly made of rock and metal. Jupiter, Saturn, Uranus and Neptune are called 'gas giants'. They are mostly composed of gas and they have rings. The smallest planet is Mercury and the.

Moons travel around planets. Earth has got just one moon, but there are at least 150 moons in our solar system. Jupiter and Saturn are the planets with the most - 53 confirmed moons each! Mercury and Venus have no moons at all.

Stars are enormous balls of very hot gas. Our closest star is the sun, and it's 150 million km away from planet Earth! Without the sun's energy, there would be no life on Earth.

An easy way to remember the order of the planets is to use a special sentence, such as 'My Very Educated Mother Just Served Us Noodles'. The first letter of each word is the first letter of each planet. Or you could make up your own sentence! .

Yuri Gagarin became the first human to travel in space in 1961. Then, in 1969, astronauts Neil Armstrong and Buzz Aldrin landed on the moon as part of the Apollo 11 mission. There have been many more missions to space since!
