

Solar system for 30 hp motor

Overview

How many HP can a solar motor produce?

The output of our Solar Motor can range from fractional horsepower up to 2 HP. Our Solar Powered Motor physical dimension ranges from 3.3" in diameter up to 6.0" in diameter. The electrical source can be 12 volts or 24 volts, or any other voltage that your solar array will produce.

What are the dimensions of a solar powered motor?

Our Solar Powered Motor physical dimension ranges from 3.3" in diameter up to 6.0" in diameter. The electrical source can be 12 volts or 24 volts, or any other voltage that your solar array will produce. Send us your questions and we will be glad to work with you on your design.

Can a met solar power motor run a water pump?

Our MET Solar Power Motors can work well in some water pump and fan applications here. With indirectly powered systems you configure a battery between the solar panels and the motor. This lets the Solar Panel Motor run when the sun is not shining, but this option requires a battery charge controller.

Where are solar powered DC motors made?

Our Solar Powered DC Motors have all been manufactured in our plant in Winnebago, MN since 1969. If you have an application for a Solar DC Motor, just send us your specifications and we will be glad to send you a no obligation quote. The output of our Solar Motor can range from fractional horsepower up to 2 HP.

Can a solar powered DC motor run without a battery?

Your solar-powered DC motor will run just fine without a battery, but it is recommended to add one so the use of your motor isn't limited to the amount of daylight you have. Once you understand all of the components, the process

is very simple. First off, you have two main components: the solar panel and the motor itself.

How does a solar power motor work?

MET Motors was able to duplicate the performance for their motor and deliver them locally. For directly powered systems the solar panels start to provide the Solar Power Motor with low power as the sun rises, increasing during the day, and dropping to zero at night. The motor performance parallels these voltage and current levels.

How many Solar Panels required for running 2 hp motor pump

Things are a bit slow today so I'll play around here. This isn't really a panel equation. Inverter size is the biggest question along with wire sizing. 2HP is a beast of a pump, I think, for sure, 220/240 volt with ~ #6 wiring. 220/240 volt means two inverters and they may have to be big ones such as is available from Magnum Energy.
