What is the purpose of the grounding system design guide?

Scope: This guide is primarily concerned with the grounding system design for ground-mount photovoltaic (PV) solar power plants (SPPs) that are utility owned and/or utility scale (5 MW or greater). The focus of the guide is on

differences in practices from substation grounding as provided in IEEE Std 80.

What are the design criteria for a grid connect PV system?

The actual design criteria could include: specifying a specific size (in kWp) for an array; available budget; available roof space; wanting to zero their annual electrical usage or a number of other specific customer related criteria. Determining the energy yield, specific yield and performance ratio of the grid connect PV system.
