## Overview

---

Compressed air energy storage (CAES) is an energy storage technology that is.

2.1. Flexible Vessels Flexible vessels (also known as “energy bags”) are made of coated fabric serving as the air/water barrier, with reinforcing straps to carry the main.

Vessels for UWCAES require anchorage capacity in proportion to their storage capacity, and useful plant sizes require significant amounts of anchorage. Economically attr.

Discussion in the chapter has so far mostly covered the nature of compressed air stores underwater. We now look at the machinery and infrastructure required for a UWCAES plant a.

Suitable locations for UWCAES are those with deep water close to shore. In a study of coastal waters with depth greater than 400 m around Europe and North America, it was found that m.
