SEOUL, May 26 (AJP) - South Korea has launched its most ambitious energy storage initiative yet, opening the door to what officials estimate could become a \$29 billion market by 2038 — offering a much-needed boost to domestic battery manufacturers grappling with a global slowdown in electric.

Less than a decade ago, South Korean companies held over half of the global energy storage system (ESS) market with the rushed promise of helping secure a more sustainable energy future. However, a string of ESS-related fires and a lack of infrastructure had dampened investments in this market.

As part of its ambitious energy transition, South Korea is launching a major procurement effort for battery energy storage systems (BESS), seeking to add 540MW of new capacity to its grid infrastructure. This move underscores the country’s growing urgency to manage renewable energy intermittency.

South Korea today selected three power utilities as bidders for its tender to

build and operate long-cycle battery energy storage (ESS) in Jeju province. The winning bid will secure a term tender of 15-20 years, which will determine the price and volume through the ESS bidding market. Providers.
