

# **Successful bid price of industrial battery cabinet project in Spain 2026**

## Overview

---

Stellantis and CATL will jointly invest up to €4.1 billion in this large-scale European battery facility, designed to be fully carbon-neutral. The project will be executed in multiple phases and relies on support from Spanish and EU authorities to achieve its goals.

Stellantis and CATL will jointly invest up to €4.1 billion in this large-scale European battery facility, designed to be fully carbon-neutral. The project will be executed in multiple phases and relies on support from Spanish and EU authorities to achieve its goals.

The blueprint for the capacity market includes two key differences to similar mechanisms in other European countries: (i) a zero emissions limit on new capacity excludes the development of gas plants and (ii) 'paid as bid' pricing (vs the usual 'paid as cleared'). Existing assets can bid for 1 year.

Stellantis and CATL today announced they have reached an agreement to invest up to €4.1 billion to form a joint venture that will build a large-scale European lithium iron phosphate (LFP) battery plant in Zaragoza, Spain. Designed to be completely carbon neutral, the battery plant will be.

This abundance of flexible hydro generation helped mask the growing solar pressure on prices, keeping daily spreads relatively compressed at around €73/MWh despite massive solar buildout. These compressed spreads have lowered the energy arbitrage opportunity for batteries. However, despite another.

The report explores trends and forecasts across residential, commercial & industrial (C&I), and utility-scale battery segments, offering deep insights into Europe's energy storage landscape. With record growth in 2024 and new projections through 2029, the study highlights key market drivers.

The development of the capacity market in Spain has progressed in recent months with the publication of a public consultation in December 2024. The process is currently following these steps: Public consultation: Recently concluded after a six-week period, during which feedback was received from.

With an investment of more than 7,000 million euros, the national territory will host important projects, among which the gigafactories and assembly plants of PowerCo Spain, Envision, Basquevolt, Stellantis, InoBat, FORD Almussafes and Phi4tech stand out. Added to these are other initiatives linked. Should batteries be a 'pay as bid' model in Spain?

As things stand in Spain, batteries will need a significant boost from capacity prices to fill the gap above wholesale, balancing & ancillary revenue streams. The 'pay as bid' structure of the capacity market can help battery assets achieve this.

Can batteries access the balancing market in Spain?

Balancing markets are another key source of battery revenue, but regulatory reform is required for batteries to access the Spanish balancing market. This is likely to happen relatively quickly but creates uncertainty around the level of balancing revenues.

Will CCGT fixed cost recovery help the Spanish capacity market?

As in other European capacity markets, CCGT fixed cost recovery will likely provide important medium term price support in the Spanish capacity market. New build batteries and existing CCGTs are likely to dominate price setting in the Spanish capacity market across the 2020s, but there will also be other technologies competing for contracts.

How can battery assets achieve 'pay as bid'?

The 'pay as bid' structure of the capacity market can help battery assets achieve this. Batteries may be very flexible, but they are constrained by relatively short duration response (e.g. a 1 to 4 hours discharge range).

When will Spain implement the capacity market?

Spain is planning to implement the capacity market across the next two years, given EU approval timelines. But the government is targeting transitional auctions in the meantime to secure capacity into the mid 2020s and test the mechanism.

How much money will Spain invest in a Gigafactory & assembly plant?

With an investment of more than 7,000 million euros, the national territory will host important projects, among which the gigafactories and assembly plants

of PowerCo Spain, Envision, Basquevolt, Stellantis, InoBat, FORD Almussafes and Phi4tech stand out.
