Standard 20ft containers

Standard 40ft containers

Overview

What is a Tesla Powerwall system?

A Powerwall system consists of at least one Powerwall, a Tesla Gateway and the electrical hardware required by the home such as a meter, main panel and solar inverter. Powerwall can be wall-mounted or floor-mounted, and both Powerwall and the Gateway have multiple cable entry points for flexible installation.

How does the Tesla Solar panel installation process work?

The Tesla solar panel installation process begins with scheduling and preparing for your installation prior to your actual installation day. Once your system design is finalized and we have the necessary approvals to move forward with your project, we will schedule your installation on the first available date.

How do I buy solar panels from Tesla?

Buying solar panels from Tesla is fast and simple. We use an online and virtual process to provide you the best value system and fastest time to installation. Learn more about installing solar for your home.

Can Tesla Powerwall be installed indoors?

- For cold climates Tesla strongly recommends installing Powerwall indoors when possible (particularly when long outages are expected).
- For hot climates Tesla recommends keeping Powerwall out of direct sunlight. Installation in full sun raises the temperature inside the enclosure above ambient temperature.

How do solar panels mount?

During most installations, mounting rails are secured to the roof planes and solar panels are attached to those rails. With Tesla's Zep mounting technology, we use 30% fewer anchor points than traditional solar companies,

meaning less roof penetrations and faster installation.

How do I install a Powerwall system?

Powerwall can be wall-mounted or floor-mounted, and both Powerwall and the Gateway have multiple cable entry points for flexible installation. Installers can use a smartphone, tablet or laptop to commission the Powerwall system. Installation should be performed by a certified electrician.
