

# The first offshore island smart microgrid

## Overview

---

Pratas Island, also known as the Dongsha Island, in the north of the South China Sea, is located 850 kilometers (530 miles) southwest of Taipei, Taiwan. What is the Dongao Island smart microgrid project?

**Project structure** The Dongao Island megawatt-level independent smart microgrid project was China's first megawatt-level microgrid system with complementary wind, solar, diesel, and energy storage, and was also China's first commercial-run island smart microgrid system. The project was constructed in two phases.

Which island hybrid microgrid is best?

The proposed optimized island hybrid microgrid is referred to as the best in terms of system availability and reliability, because it addresses three crucial criteria: techno-economic feasibility, system dependability and system availability to ensure a continuous power supply for remote and island areas of Bangladesh, such as Bhansan Char.

What are the island microgrids?

Table 1. Summary of the island microgrids. Recently, three unique stand-alone microgrid projects have been built at Dongfushan Island, Nanji Island, and Beiji Island in the east China, with an aim to replace diesel with renewable energy to improve renewable energy utilization, enhance power supply reliability, and reduce power supply cost.

Do Island microgrids work in the East China Sea?

Three representative island microgrids in the East China Sea are demonstrated. Key technologies such as control technology and energy management for island microgrids are studied. Renewable energy penetration is discussed for the design and operation of island microgrids.

How much does the island microgrid system cost?

Total economic easement of the island microgrid system is illustrated in Table 5, which concentrates on the cost-effective economic assessment of the microgrid system. The total NPC of the system is around 50,30,362 \$, which is calculated from HOMER optimization. The optimized operating cost is around 86,090 \$/yr.

How can Microgrid technology benefit Taiwan?

Renewable energy, diesel generators, energy storage and load consumption are coordinated to maximize fossil fuel savings and operate more efficiently. Itu Aba Island and Pratas Island are the most distant from Taiwan. To build up the microgrid technology in the remote small island, the economic and environmental benefits can be obviously achieved.
