

The hazards of solar photovoltaic panels on the roof

Overview

Can a roof-mounted photovoltaic system cause a fire?

Fires on roof-mounted photovoltaic (PV) systems are rare. When they do happen, however, a combination of electrical hazards, combustible components and limited access can result in significant losses. As the technology becomes more common, this paper discusses how building owners and occupiers should approach and minimise the risks of PV systems.

Are solar panels dangerous?

From fire damage to leaking roofs, solar panel installations come with their fair share of challenges. To understand the risks in more detail, check out our article on the challenges and risks of solar panels. 2. Is your roof suitable for Solar panels?

.

Are roof mounted PV systems a hazard?

Common property hazards to be assessed when considering the installation of roof mounted PV systems include: PV systems introduce new electrical components such as wiring, invertors, control equipment as well as the PV panels themselves. These components can be subject to failure, damage, or heating, increasing the risk of fire.

Are solar panels a fire hazard?

However, the installation of PV systems to a building can introduce new hazards which may increase the likelihood or severity of a loss. Data obtained by The Independent in 2023 indicates a rise in the number of fires involving solar panels, with six times the number in 2022 compared with 10 years earlier.

Are PV panels a fire risk?

which is in line with findings by Kristensen and Jomaas (2018). KEY TAKEAWAYS: The fire risk with PV panels on roofs is larger than without panels. Assessing the fire safety of a PV installation must be done on the system level because individual elements do not necessarily present the risk comprehensively. However, the true risk emerges.

Can a PV system damage a roof?

Roof damage can result from excessive load of snow/rainwater combined with the weight of the PV system. PV systems can move in the event of seismic activity resulting in damage and the potential for fire. The installation of a PV system can introduce new components which may increase the likelihood or severity of a loss.
