

The photovoltaic pallet board was broken after cutting

Overview

Should you ship solar panels if they're broken?

All in all, transporting and shipping solar panels should be delicate. Surely, you aren't always in control of the delivery. If your solar panels have arrived and some of them appear to be broken – don't panic.

What happens if a solar panel is damaged?

Regular maintenance and inspections can help identify electrical component damage early on, preventing further complications and ensuring the optimal performance of your solar panel system. In certain cases, even if a solar panel is damaged, it may retain some functionality.

How to protect solar panels from damage?

To be on the safe side, collecting data on the journey of solar panels by monitoring the environmental conditions during transit might reveal damage hotspots and also comes in handy during the claims process. Inspect the solar panel before shipping for any apparent damage. Pack your panels vertically.

Are solar PV panels fragile?

Solar PV panels are fragile, and even perfectly produced panels can get damaged, scratched, or non-functional due to poor logistic services.

Can a cracked solar panel still be generating electricity?

The cracked panel may still be generating electricity but Ben Robinson, director of Exeo Energy, advises getting it replaced as soon as possible: "This will eventually result in issues, normally as soon as moisture enters the panel". See if you can get a replacement panel under warranty. If so, Mr Robinson advises that:.

What should I do if my solar panel is damaged?

When dealing with broken or damaged solar panels, it is crucial to assess the extent of the damage before proceeding with any repairs or replacements. This process comprehensively evaluates the panel's physical condition and electrical performance. Begin by conducting a meticulous visual inspection of the solar panel.
