

The photovoltaic panel bracket is made of aluminum alloy

Overview

What is solar photovoltaic bracket?

Solar photovoltaic bracket is a special bracket designed for placing, installing and fixing solar panels in solar photovoltaic power generation systems. The general materials are aluminum alloy, carbon steel and stainless steel. The related products of the solar support system are made of carbon steel and stainless steel.

What are solar panel brackets made of?

Marine-Grade Materials Ready for the elements Our solar panel brackets are made of a T66 graded alloy, which we use for its incredible reliability, versatility and high strength-to-weight ratio. T66 is used in shipbuilding and offshore industry, so you will never have to worry about weather or the elements.

What materials are used in solar panel frames?

Here are the main things to know about the materials used in solar panel frames: Aluminum alloys: Aluminum alloys 6063 and 6005 are the primary materials used for solar panel frames due to their high strength, firmness, and corrosion resistance .

What is a solar panel frame?

A solar panel frame is a frame made of aluminum that seals and secures the parts of a solar panel, like the solar cells and glass. It is like the main part of PV solar panels. It is really important in putting together a solar panel. A machine called a solar panel framing machine is used in the process of making solar panels.

What types of solar photovoltaic brackets are used in China?

At present, the solar photovoltaic brackets commonly used in China are divided into three types: concrete brackets, steel brackets and aluminum alloy

brackets. Concrete supports are mainly used in large-scale photovoltaic power stations. Because of their self-weight, they can only be placed in the field and in areas with good foundations.

Is aluminum a good material for solar panels?

With its advantages of light weight, high strength, corrosion resistance and durability, aluminum is widely used in building solar panel frames and photovoltaic supports. Research shows that aluminum is the most widely used material in solar photovoltaic (PV) applications, accounting for more than 85% of most solar PV modules.
