- There is a synergistic relationship between solar energy and energy storage: cost declines and greater deployment of one create greater market opportunity for the other. It is a remarkable time for solar power.

Are solar photovoltaics costing more?

Provided by the Springer Nature SharedIt content-sharing initiative The costs for solar photovoltaics, wind, and battery storage have dropped markedly since 2010, however, many recent studies and reports around the world have not adequately captured such dramatic decrease.

Is solar PV a cost-competitive source of energy in China?

In this case, the cost advantage of solar PV could be further amplified. The decline in costs for solar power and storage systems offers opportunity for solar-plus-storage systems to serve as a cost-competitive source for the future energy system in China.

Is solar power cost competitive?

We find that the cost competitiveness of solar power allows for pairing with storage capacity to supply 7.2 PWh of grid-compatible electricity, meeting 43.2% of China's demand in 2060 at a price lower than 2.5 US cents/kWh.

Does solar PV power have a cost-competitive parity potential?

Building on this, the prices and the dynamic cost-competitive parity potential of solar PV power were modeled spatially across China over the study period tuned with the up-to-date economic parameters.

Is solar power a viable energy source?

During the past decade, solar power has experienced transformative price declines, enabling it to become a viable electricity source that is supplying 1% of U.S. and world electricity.
