

The role of solar power boiler

Overview

Installing the solar panels on the roof is the easy part- it's managing the solar heating alongside the existing heating system which is proving to be the problem. This is because most people tend to utilise their hot water and heating during the mornings and evenings, however, solar energy only lands on the panels during.

Technically, yes, it can be done, however, there are a great number of factors that determine whether or not your solar thermal system can actually be matched with the combi boiler you have installed. Only some types of boiler.

If your heating bills are becoming surprisingly high, it's probably because your old boiler is inefficient. If you're in need of a new boiler but don't fancy the idea of solar water.

Is your home in a sunny location that would allow it to benefit from solar panels?

You need roughly 5 square metres of roof space facing East to West through South collecting sunlight in order.
