

The snow on the photovoltaic panels is frozen

5 Years warranty

Overview

Short answer — yes, they do. Solar panels convert sunlight into electricity, and as long as there is sunlight falling on the panels, it does not matter how hot or cold it is. Our video with SolarReviews Founder Andy Sendy discusses how different weather conditions impact how much electricity your solar panels produce: In.

Solar panels cannot generate solar energy if they are covered in snow. The good news is that you can eliminate this issue by either waiting for gravity to do its job and having the snow.

Snow guards can be added to your solar panel array to hold back large amounts of snow and prevent future solar system maintenance and repairs. Snow guards make sense if you live in a location that gets several feet of heavy.

If you live in a place that experiences regular winter weather, including snowfall - do not let that deter you from getting solar panels. Keep in mind, solar panels are very popular in some of the snowiest states. In fact, New York.

Yes - solar panels can be installed in the winter! However, some installers may want to wait to begin an installation until the warmer weather starts.
