

There is no electricity in the mountains so use solar energy to generate electricity

Overview

How the sun can be used to generate electricity?

Find out how the sun can be used to generate electricity. Electricity is generated from energy from the Sun by solar panels. These are made up from individual solar cells (also called photovoltaic cells). Light from the sun passes through the glass cover of a solar cell.

Should you use solar power to generate electricity at home?

Using solar power to generate electricity at home is a very appealing option for a number of reasons: not only would you be reducing your overall environmental footprint and greenhouse gas emissions, but you would be reducing your bills and could even generate some income by selling back excess energy into the grid.

Does solar power work in local areas?

Local areas must be studied to determine whether or not solar power would be effective in that area. Sunlight must be abundant and consistent for solar energy to be an efficient choice. In most places on Earth, sunlight's variability makes it difficult to implement as the only source of energy.

Do solar panels generate electricity at night?

Solar panels generate no electricity at night time. Solar panels can't store energy, so you have to use the electricity they generate when the sun is shining. You need batteries to store the energy generated. These are expensive. – Solar cells convert the light from the sun into electricity.
