

# **Total investment cost of gel battery storage project in Spain**

## Overview

---

The total investment is estimated at EUR 786 million, with an average subsidy covering 21.32% of a project cost. If the provisional resolution is confirmed, EUR 150 million will be granted to 35 battery energy storage projects with a cumulative power output of 757 MW and a storage.

The total investment is estimated at EUR 786 million, with an average subsidy covering 21.32% of a project cost. If the provisional resolution is confirmed, EUR 150 million will be granted to 35 battery energy storage projects with a cumulative power output of 757 MW and a storage.

Pending approval, a total of EUR 167.6 million (\$187.1 million) has been allocated toward 46 standalone thermal and electrical energy storage projects, with a cost range from EUR 170/kWh to EUR 409/kWh. The Ministry for Ecological Transition and the Demographic Challenge (MITECO) has published the.

- Carry out an economic study of the profitability of two energy storage technologies in Spain. Assess the need to foster their installation. Analyze their profitability, and the convenience to establish support mechanisms. II. Load following III. Voltage support IV. Black start capability Around.

LCP Delta and Santander have combined their expertise to provide this report into the opportunity for investment in battery energy storage systems (BESS) in Spain. BESS. ESO. The only long-term forecasters who also support traders in real time. Economic, policy and regulatory analysis on the.

This report is part of a series that analyses the battery storage market in select European countries. Spain's battery storage market is dominated by customer-sited systems. Utility-scale storage remains nascent. Currently, Spain's storage market is mainly composed of small-scale batteries.

With an investment of more than 7,000 million euros, the national territory will host important projects, among which the gigafactories and assembly plants of PowerCo Spain, Envision, Basquevolt, Stellantis, InoBat, FORD Almussafes and Phi4tech stand out. Added to these are other initiatives linked.

The Ministry for the Ecological Transition and the Demographic Challenge (MITECO) in Spain launched an investment support scheme for hybrid/co-located energy storage projects in December 2022. The funding covers between 40-65% of the investment costs for energy storage projects but excludes green. What is Spain's battery storage market?

Spain's battery storage market is dominated by customer-sited systems. Utility-scale storage remains nascent. Currently, Spain's storage market is mainly composed of small-scale batteries co-located with solar PV. Spain's household electricity prices now stand at over EUR 0.30/kWh on average.

Why are battery storage options more suitable in Spain?

As a result, shorter duration storage options like batteries are more suitable in Spain. In Spain, over 50% of excess renewable energy occurs in periods where there is continuous excess for less than 12 hours i.e. a battery that chooses to charge on this energy would be able to discharge within 12 hours.

Is combining solar and storage a good idea in Spain?

This variability, combined with Spain's excellent solar resources, make the economics of combining solar with storage increasingly favorable. The market for utility-scale batteries has been almost non-existent until recently as the market has lacked a clear policy and regulatory framework.

How much grid-scale storage will Spain have in 2025?

As of early 2025, Spain has roughly 1 GWh of grid-scale storage under construction, according to industry sources. This new wave of funding could accelerate the build-out, enabling developers, integrators, and OEMs to expand their footprint in one of Europe's most promising emerging markets.

What revenue streams are available to battery energy storage systems?

Revenue Streams: The wholesale and ancillary service market (comprising over 5 revenue streams) is available to battery energy storage systems. Spain has approved plans to introduce a capacity market.

How many independent storage projects are awaiting grid connection?

According to IEA data, there are currently 540 GW of independent storage projects worldwide that are awaiting grid connection. The vast majority of these storage projects are still at an early stage or being explored.
